

DEPARTMENT OF COMPUTER APPLICATIONS

STUDENT NAME : Rajasree K (250282601092)

PROJECT TITLE : CampusNova AI - An AI-Powered Smart Campus Ecosystem

PROJECT DOMAIN AREA : Artificial Intelligence | Web Application | Smart Campus Management

ABSTRACT : CampusNova AI is an AI-powered Smart Campus Ecosystem that brings all essential student services into a single web application. The platform enables students to communicate with seniors and juniors, share academic resources, report and recover lost items, participate in campus events, apply for internships, collaborate on projects, and access student services through one centralized system.

Departments can publish announcements, organize workshops, symposiums, hackathons, and recruit volunteers efficiently. Artificial Intelligence enhances the platform by providing personalized recommendations for events, internships, learning resources, project teammates, and career opportunities based on each student's skills and interests. AI also supports intelligent search, image-based lost item matching, and smart notifications.

By integrating communication, collaboration, resource management, and opportunity discovery into one platform, CampusNova AI aims to create a connected, intelligent, and future-ready digital campus ecosystem that improves student engagement and simplifies campus life.
